

How does HAC/RMPE help?

Ogden Air Logistics Center

- Automates many functions that combat crew members used to have to perform manually:
 - Alarm notifies 2-person crew of new message
 - Rips hard copy of message off of printer (up to three times for each message)
 - Using grease pencil, manually determines type of message, then manually formats
 - Manually decodes message
 - Manually performs any necessary error correction
 - Manually types in information into launch control computer

is there an SCATM available?

How does HAC/RMPE help?

Ogden Air Logistics Center

- **With HAC/RMPE:**
 - Only one copy of each message is received; system eliminates duplicate copies
 - Most message formatting, decoding, and error correction done automatically
 - Displays messages in easy-to-read format
 - Crew doesn't have to retype information into launch computer; HAC/RMPE automatically passes it over
