Job Description:

BAE Systems in Rockville, MD, is seeking a dynamic and progressive engineer for a team developing information systems software for a U.S. Navy customer. The team enjoys and extraordinarily effective working relationship with the customer. Software products support equipment maintenance on board submarines and supporting shore activities. Software is developed using an AGILE engineering model and tool set to include automated testing. This team supports the entire life cycle from needs identification through sustainment of deployed software.

There is no relocation assistance available for this position. If relocation is necessary the selected candidate must be willing to relocate at his/her own expense.

This successful candidate will support the team leader and organizational management with planning and management of successful software development projects. While largely focused on supporting planning and management, the role will also include contribution to the development and implementation of effective technical solutions.

Minimum Education and Experience:

Bachelor's Degree and 5 years work experience or equivalent experience

Required Skills and Education:

Minimum education required: Bachelor's degree, preferably in a related discipline

Minimum years of related work experience required: 5 years

Security clearance requirement: Must be eligible to obtain and maintain a DoD Secret security clearance (U.S. Citizenship is required)

Must have the following skills/experience:

- Good verbal and written communication skills
- Ability to engage external customer
- Practical familiarity with key aspects of the software development project planning and management disciplines, such as: Project Planning, Requirements Identification and Management, Cost and Schedule Estimation and Management, Configuration Management and Product Validation and Verification

Preferred Skills and Education:

Highly desired education/skills/experience:

- MS in Information Systems or related field and at least 3 years related experience
- AGILE Software Engineering approach
- J2EE
- Familiar with Department of Defense/Navy Cyber Security policy and practice
- CMM, CMMI, PMP or analogous training or certification
- MSPProject
- Knowledge of existing and upcoming technologies for modernization opportunities and efficiencies
