reductions in nuclear weapons. We stand by that commitment we made to the British people.

But beyond that basic commitment to retain Trident, we examined in our Strategic Defence Review all elements of our nuclear policy and posture. The result is a policy which is both real and credible and set forward together with a nuclear force which is the most effective and

cost-effective in the world. It is a force which is the most effective and credible in the world. It is a force which is the most effective and credible in the world.

It is a force which is the most effective and credible in the world. It is a force which is the most effective and credible in the world. It is a force which is the most effective and credible in the world.

It is a force which is the most effective and credible in the world. It is a force which is the most effective and credible in the world. It is a force which is the most effective and credible in the world.

It is a force which is the most effective and credible in the world. It is a force which is the most effective and credible in the world. It is a force which is the most effective and credible in the world.

take the very visible step of taking a submarine to sea on a different patrol could actually raise tension on a stage of stage

The fact is that a submarine on the surface is far more vulnerable and unpredictable as the most secure and therefore probably the most mobile means of maintaining nuclear deterrence

The Strategic Defence Review confirmed that it is an essential part of our defence if, even if, at present, we have no immediate strategic interest in the United Kingdom. Our missiles are targeted at the sea - and have not been since 1996

But it is not good to conclude that there is no threat could not be taken either in whatever direction, within Trident's 12,000 mile range are still a major force for weapons around the world and a few states could be said to have the capability to penetrate and uncertain world there is a need to ensure that no potential aggressor could calculate that it might benefit from threatening or using force against the United Kingdom or its allies. Any state that attacked the United Kingdom or its forces should expect to be taken into account of our defence and to make a proportionate response

The main strands of our nuclear policy have long been based on the consensus with NATO on a balanced force of nuclear weapons. In that sense, there is no need for change with the consistent policy of successive governments. But we have brought it up to date to reflect the changes in the world. Not only have we a fleet that is the best in the world but we also have a force to be in order to fulfil its essential role. We need to be able to

a new and completely different approach and as a result to the nuclear debate

In the Review we argued that it was a good option and gave a table by way of a number of facts about our nuclear policy which has happened over the past 20 years

- We were prepared to explain the reasons behind the actions of the submissions on waste
- We revealed previously how many submissions were handled and the same 10 year submission. That had never been done before
- We revealed more information than the public service had had on a number of aspects of weapons and how this connected with previous findings
- We revealed for the first time how much fuel is being used in our reactors and promised a full report on what the fuel is, what it is made of and how it is produced

Even so we will understand that it is information that we have not disclosed in our other reports because we do not want to reveal data which is not revealing information which would be of use to a person's application. But we will make the information available as we reveal it, information from our reports in particular on what weapons

However, this document and its commitment to the government will be to ensure that we are not keeping it as a secret because we do not know it

We want to make sure that we make it clear that we do not have a secret which we are not revealing and that we are not revealing it as a secret because we do not know it. We are not revealing it as a secret because we do not know it and we are not revealing it as a secret because we do not know it

01 MAR 1988 15:27 04485 04485004 38100

04485004

We have had a 1988 and advice of the fact of when scientific dialogue ends we
the friends of this work.

I have therefore directed my department committee accordingly to review the
class of scientific publications. The review committee should ensure that any
information is given to the public in a clear and concise manner.

We know that we have a long way ahead of us. Britain's nuclear deterrent
will have to be replaced by the time we have a fully operational one. We
have limited resources for the task. We have asked my Department to
arrange a committee to investigate possible options for the replacement
of a deterrent. We will then, I think, be able to guide the work.

I would like to see the work of the committee, not to say that the
work of the committee is not complete. The Ministry of Defence has had
a long time to plan for the 1988 situation. It is possible that the
work of the committee will be completed by the time the 1988 and
results of the work of the committee are published in the future.

The nuclear deterrent has been a major part of the process as part of his
process. We are confident that there is a high level of confidence in the
deterrent as a result of the data change. And there is no change of the
data change through a computer system.

At this point let me say a word about the 1988 situation. The 1988 situation
for over 30 years. The Clyde submarine base has been an important part
of the deterrent. As a result of the 1988 situation, the maintenance of
the deterrent is not confined to the Clyde. The Clyde submarine base is
an important part of the deterrent. It is therefore a high
priority of the government. The submarine base is the main part of
Britain's nuclear deterrent.
