E&SD System Integration Requirements Engineer

Excellent Salary & Benefits Package
Nr Reading, Berkshire

Summary of the Role

The role will involve managing a team of Requirement Engineers that will be a focal engineering requirement for future weapon systems. Understand requirements at all levels from project through system to verification and validation. Developing the capability including processes and use of tools to capture and use requirements information. Assist other staff using requirements management systems. Assist in other related duties of a management/planning role.

About The Atomic Weapons Establishment (AWE)

Tasked with maintaining the UK's nuclear deterrent, the Atomic Weapons Establishment is without equal. No other organisation in the UK does what we do. Nor do they operate the way we do. This means our people can push the boundaries of conventional thinking and enjoy a wealth of stimulating challenges that are of real national importance.

Knowledge, Qualifications, Experience and Skills

- A HNC / HND or degree in a relevant engineering discipline, ideally with an additional qualification in systems engineering.
- Knowledge of defence procurement and the UK defence industry.
- A broad knowledge of a number of technical disciplines.
- A broad experience of one or more of engineering: requirements synthesis, operational analysis, weapons systems integration, defences and radar systems design or analysis, avionics development, commercial off the shelf (COTS) procurement and integration, engineering analysis and modelling, configuration control, design and trials assessment, or similar activity.
- A strong affinity towards precise understanding of requirements and a good working experience in that area is essential.
- Use of requirements capture tools and other management systems.
- Good communication and presentation skills.
- Ability to manage own workload.
