Subject: Problems running X app on Solaris 9

From: Buckwalter Richard S DLVA < Buckwalter RS(-at-)NSWC.NAVY.MIL>

ld: <BF99A3F2010AD211A59700805F9F94B508A00FCB@nswcdlvaex03.nswc.navy.mil>

Date: Thu. 19 Aug 2004 10:00:30 -0400

Gurus.

I have a domain on an E10K running Solaris 9 at patch 112233-04 and X11/R6. I'm trying to run an X application which flashes to the display and I get the following error:

X Error of failed request: BadAccess (attempt to access private resource denied)

Major opcode of failed request: 89 (X_StoreColors) Serial number of failed request: 441 Current serial number in output stream: 442

This behavior only occurs when I display to a thin client (SunRay). The SunRay software we are running is version 2.0 on an E5500 running Solaris 9 at patch level 112233-11.

Any help with this would be greatly appreciated.

rick
