

memo 2009 14801 (- 87) 11/16/93

US had gone for their 'walled factories'

A 90 - Zone 1 pipe side debris in fire for gross hours (altered speed limit goes to different cars and contents) debris spent - of A 90 1998.

When report was in 1 00 or old party. P 500 - 7000 products stored in so ahead on old factories.

late Apr we ed out with.

In unit seminar - 'more M.P. goes on little information on possible?'. pots of debris from A 91 - used bag instead of denim material -> changed

Phil Scott HSE - would's answer Q or days to shift of waste storage.

Frank Smith Health Physics A 95 - have had some radiation outside walls of Larson (circulate waste)

PRs 500 - those are bricks there are

Lead - ~~the~~ this is not safe - because materials with degrade PR -> by -> materials.

11/16/93

Personnel

Air 5 Admiration

Walls in Pt Star have airbrick

incides Dec 92 1145 - 2h before employee still; had to guard about 4 combusted

- change of incides that happened was not obvious considered -> company + Safety

HSE - "nearby problem with road - releases to company; Pt ->

A 1 -> A 1 incides -> A 45

Wickham - per lit with panel in nuclear industry

700 class - boat 15 gm to personal

A 95 to use sample for color & wear & breathing area.
