Description

17.1. BACKGROUND:

SSP is assessing the feasibility of developing the Launcher subsystem necessary to support the SLIRBM mission. SSP has developed baseline programmatic and technical information necessary to conceptualize the SLIRBM Launcher Subsystem (SLS). SSP requires input from industry resources to refine their understanding of the technical feasibility, risk and cost implications associated with this effort. Specifically, this RFI documents a Government request from industry for the preliminary conceptual design and rough order of magnitude cost information associated with SLS development and production.
